

Juzdog

Dog Event Management Platform

Project Requirements & Scope Review — For Client Discussion

1. Purpose of This Document

This document summarizes what Juzdog will do, who will use it, and exactly what is included and excluded in the project. The goal is to make sure we are aligned on requirements and scope before development begins, so there are no surprises later.

Pricing and package details are covered separately and are not part of this document. This document focuses purely on the platform's features, functional requirements, and project boundaries.

2. What is Juzdog?

Juzdog is a web-based platform for managing dog shows and breed competitions in India. It replaces manual processes (spreadsheets, WhatsApp groups, paper forms) with a structured digital system covering the full event lifecycle:

- Club (event) creation and listing
- Dog owner registration and dog profile management
- Online registration and payment for events
- Live competition round management and winner tracking
- Notifications to participants
- A public media gallery of photos and videos

2.1 Who Uses It

Role	Who They Are	What They Can Do
Admin	Platform owner / operator	Full control: events, sub-admins, judges, FCI groups, notifications, metrics, payments
Sub-admin	Event manager / club owner	Create & manage assigned events, enter competition results, manage judges
User	Dog owner / participant	Register account, manage dog profiles, register for events, view results
Public	Unauthenticated visitor	Browse events, view photo/video gallery

3. Goals & Success Measures

These are the outcomes the platform is designed to achieve:

Goal	How It's Measured	Target
Reduce registration effort	Time to register a dog for an event	Under 3 minutes
Digitize competition management	Rounds tracked digitally	100% of rounds
Improve communication	Notification delivery rate	Above 95%
Track dog achievements	Winner tags applied after event	Same day
Platform adoption	Dogs registered within 6 months	Over 200 dogs

4. Core Features (Functional Requirements)

This section explains, in plain terms, what the platform will do.

4.1 Account Login & Roles

- Users can sign up and log in using Google, Facebook, or email/password
- Admin and sub-admin accounts are created only by the Admin (no public signup for these roles)
- Sessions stay logged in across browser tabs for 7 days
- Users can reset forgotten passwords via an email link
- Every part of the system checks the user's role before allowing access

4.2 Dog Profile Management

Each registered dog has a profile containing: name, breed, date of birth, gender, color/markings, KCI registration number, microchip number, owner name, breeder name, KCI certificate file, FCI group, and photo.

- Users upload their dog's KCI certificate (image or PDF)
- The system automatically reads the certificate and pre-fills the dog's details (name, breed, KCI number, owner, breeder, date of birth, microchip number)
- Users review and correct any details before saving — the system does not guarantee 100% accurate reading, manual correction is always available
- Based on the breed selected, the dog is automatically placed into its FCI group (Groups 1–10); this cannot be changed by the user

Note: Certificate reading is "best effort" and is not checked against any official KCI database — the owner is responsible for confirming the details are correct.

4.3 Event ("Club") Management

Admins and sub-admins create events with details such as name, type (FCI/CACIB), dates, venue, entry fee, judges, active FCI groups, and a banner image.

- Judges have their own profiles (name, photo, bio, credentials, assigned groups) managed by the Admin and assigned to events
- Users browse open events, pick a dog to register, choose a class (Junior / Open / Champion), and pay the entry fee online
- After successful payment, the dog receives a unique serial number and a confirmation message is sent to the owner

4.4 Competition Management (Core Feature) - Will be Discussed Further

This is the main feature used during a live event. Competitions follow a structured, multi-round format:

- Round 1 — Within Breed (by Class): dogs of the same breed and class compete; one winner per breed/class moves forward
- Round 2 — Within Group: class winners from each breed in a group compete for "Best of Group"
- Round 3 — Between Groups (Best in Show): Best of Group winners compete for the overall event title
- Special Categories: judges can award titles such as Best Indian Breed, Best Fittest, Most Obedient, etc.

- Admins/sub-admins record results round by round; losing dogs are marked eliminated; winners move automatically to the next round
- Results can be edited until the event is marked "Completed"
- After the event ends, winner tags (event name, date, award) are automatically added to each winning dog's profile and shown on their public page

4.5 Metrics & Dashboards

Admin Dashboard shows: total users, total dogs, total events by status, total revenue collected, currently active events, and recent registrations.

Event-Level Dashboard (Admin + Sub-admin) shows: participants by group/breed/class, round progress, round winners, registration revenue, and remaining capacity.

4.6 Media Gallery

- Admin uploads event photos (categorized as Dog Show, Dog Pics, Posters) and videos, with bulk upload support
- Photos and videos are publicly viewable without logging in
- Admin can delete or re-categorize media

4.7 Notifications

Automatic messages are sent for key events:

- New dog profile created — confirmation message with dog name and KCI number
- Event registration successful — event details, dog name, serial number, venue
- Bulk announcements — custom messages composed by Admin sent to all users
- Event registration opens — notify users of upcoming registration windows
- Sent via WhatsApp (primary) and SMS (fallback); all sends are logged for audit, with retry on failure

5. Key User Journeys

A few real-world examples of how each role uses the platform end-to-end:

- Dog Owner: Uploads KCI certificate → profile auto-fills → reviews & saves → browses events → registers dog & pays → receives confirmation with serial number → after the event, sees winner tags on the dog's profile
- Sub-admin: Creates a new event, sets dates/fee/judges → event goes live → during the event, enters round-by-round results → Best in Show results are finalized → winner tags auto-apply
- Admin: Sends a bulk WhatsApp announcement to all users → reviews delivery status → checks platform-wide dashboard for participation and revenue → manages the FCI breed-to-group mapping as needed

6. Quality & Performance Expectations

Area	Expectation
Page load time	Under 2.5 seconds on a typical 4G connection
System responsiveness	API responses under 500ms for 95% of requests
Concurrent usage	Supports 500 people using the system at the same time without slowdown
Payment flow	Completes end-to-end in under 5 seconds
Security	Encrypted connections (HTTPS), secure password storage, role-based access checks on every action
Reliability	Daily automatic backups; failed notifications retried up to 3 times
Mobile friendliness	Fully usable on phones (screens 360px wide and up)
Accessibility	Meets standard color-contrast accessibility guidelines

7. Project Scope

7.1 In Scope

The following are included as part of the platform build:

- Web application — fully responsive on desktop and mobile browsers
- Three-tier user system: Admin, Sub-admin, and User
- Dog profile management, including KCI certificate auto-fill
- Event (club) creation, listing, and registration

- FCI group-based competition structure and round management
- Class-based tracking: Junior, Open, Champion
- Online payment collection for event registration fees
- Google and Facebook login, plus email/password login
- WhatsApp and SMS notifications for key events
- Public photo and video gallery
- Admin metrics dashboard

The exact combination of the above features, additional roles (e.g. sub-admin), source code ownership, and post-launch support included depends on the package selected — see the separate pricing & package document.

7.2 Out of Scope

The following are explicitly not part of this project:

- Native iOS or Android mobile apps (the web app is mobile-responsive but not a downloadable app)
- Live video streaming of events
- Automated or AI-based judging/scoring — all results are entered manually by Admin/Sub-admin
- Direct integration with KCI's official database (certificate reading is one-way/local only, not verified against KCI records)
- Multi-language support — the platform will be in English only for this version
- Users uploading their own videos to the gallery (admin-managed only)

8. Items We Need Your Input On

Before or during development, we'll need clarity on the following points — these affect how certain features are built:

Question	Why It Matters
When class winners (Junior/Open/Champion) move to the group round, do they compete combined, or separately by class?	Affects how the competition round screens and result logic are built
Do you need both FCI and CACIB event types at launch, or just FCI?	CACIB may use a different group structure
Who should be allowed to create special award categories — Admin only, or Sub-admins too?	Determines permission settings
Is the proposed serial number format (e.g. JZ-2025-003-042) acceptable, or do you want a different format?	Used for all event registrations
Roughly how many users do you expect at launch?	Helps choose the right WhatsApp messaging plan
Are KCI certificates always scanned paper copies, or sometimes digital PDFs too?	Affects how reliable the auto-fill feature will be

If a user cancels their event registration, should refunds be processed automatically?	Adds refund handling if needed

9. Quick Glossary

Term	Meaning
Club	Juzdog's name for a dog show event
FCI	International federation that defines breed groups (Groups 1–10)
CACIB	An FCI international championship award category
KCI	Kennel Club of India — issues official dog registration certificates
Class	Competition level: Junior, Open, or Champion
Best of Group	Top dog within an FCI group at an event
Best in Show	Overall winner, chosen from all "Best of Group" winners
Winner Tag	Digital badge added to a dog's profile after winning an award
Sub-admin	Event manager account created by Admin, scoped to assigned events

10. Next Steps

- Please review the feature list and scope sections above
- Respond to the open questions in Section 8 so we can finalize the requirements
- Once confirmed, we'll proceed with the project plan and package selection (covered separately)
